1. Program to print "Hello World"

```java
package mypackage;

public class Hello
{

        public static void main(String[] args)
        {
                System.out.println("Hello, World");

        }

}
```

2. Program to declare two integer variables and print product

```java
package mypackage;

public class MyClass
{

  public static void main(String[] args)
  {
        int a=6;
        int b=5;
        System.out.println(a*b);
  }
}
```

3. Write the difference between int and float in java

- Float stores decimal values, while
- Int only stores whole numbers

4. Read name from user and print it

```java
package myInputpackage;

import java.util.Scanner;

public class Input
{

  public static void main(String[] args)
```

```
    {
        String name;
        Scanner obj = new Scanner(System.in);

        System.out.println("Enter your name");
        name=obj.next();

        System.out.println(name);
    }
}
```
